

SELF PEER ASSESSMENT SEGP2_G9

Zainab Malik(15026433)

Description:

This system will help vaccinators and parents to get all information of vaccinations through one app. basically; this is the replacement of registered base system. if a vaccinator wants to know about any child's current vaccine's record of already given or due ones, he/she does not need to roll the pages of different platforms because all of these information will be available on this app. parents can also see their children current record by viewing updated record from the vaccinators. In short, the main purpose of this app is to bring all the information on a single platform so that both will be able to get benefit out of it.

Individual work:

In this project we can divide work in four main parts. First is documentation, second is front end , third one is database design and last but not least coding on backend. I work on database design with one of my group mate then i have written coding convention in the part of documentation, and if we divide back end coding there are two sub tasks one is data entering and other is data retrieving. I have done data retrieving part. And I also design database with one of my group mate.

Group members work:

1. Muhammad Imtiaz (15026420): He works on documentation which includes SRS, minutes of meeting, testing report.
2. Atiq Zaman (15026391): He works on documentation which includes srs, minutes of meeting, testing report along with the some coding part like notification, recycler view, calendar implementation in code.
3. Muhammad Haroon (14031184):He works on front end of our project.
4. Bilal Yousaf (14031236):He works on database , then he works on backend coding in which he has done data entering into database part.
