A self- and peer-assessment document

Muhammad Imtiaz

Project Description:

In this project we designed an android application which was about to online current children vaccination system. This system will help vaccinators and parents to get all information of vaccinations through one app. basically, this is the replacement of registered base system. If a vaccinator wants to know about any child's current vaccine's record of already given or due ones, he/she does not need to roll the pages of different platforms because all of these information will be available on this app. parents can also see their children current record by viewing updated record from the vaccinators. In short, the main purpose of this app is to bring all the information on a single platform so that both will be able to get benefit out of it.

In this project we divided work in four main parts. First was documentation, second was front end, third one was database design and last but not least was development of backend.

Individual Work:

Mainly I worked on documentation including writing SRS, minutes of meetings, test cases etc. Also I worked parallel with development cell. My tasks were to implement forgot password and data retrieval on parent side which were the part of the whole system.

My teammates Work:

1. Atiq Zaman (15026391): He worked on documentation in parallel with me while writing srs, minutes of meeting and testing report. He was also working with all other members of our group to help them and he contributed in Coding by writing code of Notification for parents and vaccinator. One of his contribution was in date which he solved by using Calendar class of java.
2. Muhammad Haroon (14031184): He worked on front end of our project.
3. Bilal Yousef (14031236): He worked on database, then he works on backend coding in which he has done data entering into database part
4. Zainab Malik (15026433): Mainly she worked in development cell including database design and data retrieval. Also she wrote coding convention document which was the part of documentation.
